

ICML Rebuttal Experiment Bundle

Anonymous Submission Artifact Index

Purpose

This document indexes the curated experiment bundle placed under `Experiments/Rebuttal/rebuttal_exp_anonym`. The goal is to expose, in one anonymous location, the original scripts, frozen paper outputs, and rebuttal-only results that answer the main concerns raised by reviewers `5p9M`, `kzcn`, `GqZq`, and `Bg6X`.

Sanitization note. Machine-specific absolute paths and local launcher paths were replaced with relative or placeholder paths in this anonymous export.

Directory Layout

- `shared/rebuttal_results/`: new results added specifically for rebuttal
- `shared/original_scripts/`: original local experiment scripts from `Experiments/`
- `shared/frozen_outputs/`: CSV/figure exports already materialized for the paper
- `reviewers/`: reviewer-specific lightweight folders with the most relevant artifacts
- `tex/rebuttal_exp_bundle.tex`: this overview document

Included Rebuttal Experiments

Folder	Content
<code>results/summary/</code>	Cross-seed summaries for rebuttal CIFAR-10 and GPT-2 comparisons, including SAGE, direct clean mixing, direct fine-tuning, and batch-mean.
<code>results/summary_clean_size/</code>	CIFAR-10 size/ validation-size ablation for <code>N_val</code> in <code>{50,100,500,1000}</code> .
<code>results/summary_fraction/</code>	CIFAR-10 fixed-budget synthetic-fraction sweep, used to quantify how much synthetic data can be mixed before worst-class degradation.
<code>results/summary_unsup_surrogate/</code>	GPT-2 unsupervised surrogate experiment, used to answer whether a clean validation set is strictly required.

Frozen Original Outputs

Some original experiments are preserved locally mainly as scripts, while the exact CSV/figure outputs used in the manuscript were already exported under `Paper/LaTEX/icml2026/Tables/` and `Paper/LaTEX/icml2026/Figures/`. To make reviewer verification easier, those frozen exports are copied here.

- High-dimensional results: `table_exp5_tail_summary.csv`
- Architecture ablations: `table_exp6_*.csv`, `exp6_trajs.png`
- MNIST recursive drift: `table_exp8_mnist_tail.csv`, `exp8_enhance.png`, `exp8_mechanism_viz.png`
- CIFAR-10 recursive self-training: `exp9_seed*.csv`, `exp9_cifar10_hist_small.png`
- Compute cost: `exp10_time_cost.csv`
- GPT-2 / Qwen: `exp11_*` figures and `qwen2_ppl_traj.png`

Reviewer Mapping

Reviewer	Main supporting artifacts
5p9M	<code>reviewers/5p9M/summary/</code> , <code>summary_cleanval_size/</code> , <code>summary_fraction_sweep/</code> , <code>summary_unsup_surrogate/</code> , <code>qwen_mauve_rebuttal_note.md</code>
kzcn	<code>reviewers/kzcn/epsilon_bound_note.md</code> , <code>summary_cleanval_size/</code> , <code>summary_unsup_surrogate/</code> , <code>exp10_time_cost.csv</code>
GqZq	<code>reviewers/GqZq/summary/</code> , <code>summary_fraction_sweep/</code> , <code>exp9_seed*.csv</code> , <code>qwen2_ppl_traj.png</code>
Bg6X	<code>reviewers/Bg6X/epsilon_bound_note.md</code> , <code>summary/</code> , <code>summary_unsup_surrogate/</code> , <code>table_exp5_tail_summary.csv</code> , <code>table_exp6_ridge_tail_summary.csv</code> , <code>qwen_mauve_rebuttal_note.md</code>

Scripts Included for Reproducibility

The bundle also includes the local scripts used for the original experiments: `exp5_high_dim_scalability`, `exp6_arch_ablation`, `exp8_mnist_recursive`, `exp9_cifar10_setaware`, `exp10_time_cost`, `exp11_gpt2_model`, and `exp13_Llama_model`.
